

PP KULJETUSLINJA OY

A versatile
and adaptable

logistics
partner

Since its incorporation in 1996 PP Kuljetuslinja Oy has provided logistics solutions for various sectors ranging from road transports to planning & operating entire supply chains.

We make sure that commercial and industrial loads move reliably between Finland and entire Continental Europe, in cost effective manner, up to the end of tarmac.

As a medium-sized operator, we can satisfy our customers' demanding capacity needs with individual and flexible services. We have a light organizational structure and are easily accessible to customers. Our 24/7 availability means customers never have to deal with an answering machine.

Wide, high, heavy... We can handle it!

We offer competitive and flexible services, especially for non-standard loads, which our fleet is tailored to match.

The rear section of our trailers can be widened, and the roof can be flexibly elevated according to needs. Most of our 100-or-so trailers come with coil beds, enabling us to transport heavy steel coils, among other things. We also have open and flat bed trailers available. In addition to our own fleet, we have a wide subcontracting network at hand which enables us to react quickly to the most demanding transport needs.

Service

24 / 7

**Comprehensive
logistics solutions**

Special transports for industry and aviation

PP Aviation Logistics, PP Kuljetuslinja's special transport unit, provides high-quality services to industrial and aviation sectors. We are familiar with special requirements in transporting aircraft engines & components, such as tyres and landing gears, as well as with diverse industrial machines and equipment - in general loads, where handling pre-, during- and after the actual carriage calls for solid competence gained from experience.

Depending on the situation, like an AOG case, a fastest route without intermediate handling and loading will be adopted. Also any special arrangements, such as a stand-in driver, can be provided to eliminate delays and risks to shipment.

Special transports are usually characterised by tight schedules and long, wide or heavy non-standard cargo units. We respond to challenges with flexible and reliable operating procedures, allowing a cost-effective logistics solution to match every case.
